The table below summarises the geometric issues observed across the polymeric chains and their fit to the electron density. The red, orange, yellow and green segments of the lower bar indicate the fraction of residues that contain outliers for ≥ 3 , 2, 1 and 0 types of geometric quality criteria respectively. A grey segment represents the fraction of residues that are not modelled. The numeric value for each fraction is indicated below the corresponding segment, with a dot representing fractions $\leq 5\%$. The upper red bar (where present) indicates the fraction of residues that have poor fit to the electron density. The numeric value is given above the bar.

SAH

The image displays the chemical structure of S-adenosylmethionine (SAH), a key molecule in biological methylation reactions. The structure is composed of three main parts: an adenine ring, a ribose sugar, and a methionine side chain. The adenine ring is a purine base, with atoms labeled N1 through N9 and C2 through C8. It is connected to the ribose sugar at the C5 position (labeled C5'). The ribose sugar is a five-membered ring with oxygen at the top (labeled O4'). The methionine side chain is attached to the C2' position of the ribose (labeled C2'). It consists of a methylene group (C3'), a sulfur atom (S), another methylene group (C4'), and a chiral center (C5') bonded to an amino group (NH2), a carboxyl group (COOH), and a methyl group (CH3). Stereochemistry is indicated with wedges and dashes: the C5' carbon is bonded to the sulfur atom with a wedge, to the amino group with a dash, and to the carboxyl group with a wedge. The C2' carbon of the ribose is bonded to the adenine ring with a wedge, to the methylene group (C3') with a dash, and to a hydroxyl group (OH) with a wedge. The C3' carbon of the ribose is bonded to the C2' carbon with a wedge, to the C4' carbon with a dash, and to a hydroxyl group (OH) with a wedge. The C4' carbon of the ribose is bonded to the C3' carbon with a wedge, to the C5' carbon with a dash, and to a hydroxyl group (OH) with a wedge. The C5' carbon of the ribose is bonded to the C4' carbon with a wedge, to the C3' carbon with a dash, and to a hydroxyl group (OH) with a wedge.

3 Residue-property plots [i](#)

These plots are drawn for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic for a chain summarises the proportions of the various outlier classes displayed in the second graphic. The second graphic shows the sequence view annotated by issues in geometry and electron density. Residues are color-coded according to the number of geometric quality criteria for which they contain at least one outlier: green = 0, yellow = 1, orange = 2 and red = 3 or more. A red dot above a residue indicates a poor fit to the electron density ($RSRZ > 2$). Stretches of 2 or more consecutive residues without any outlier are shown as a green connector. Residues present in the sample, but not in the model, are shown in grey.

The following is a two-dimensional graphical depiction of Mogul quality analysis of bond lengths, bond angles, torsion angles, and ring geometry for all instances of the Ligand of Interest. In

addition, ligands with molecular weight > 250 and outliers as shown on the validation Tables will also be included. For torsion angles, if less than 5% of the Mogul distribution of torsion angles is within 10 degrees of the torsion angle in question, then that torsion angle is considered an outlier. Any bond that is central to one or more torsion angles identified as an outlier by Mogul will be highlighted in the graph. For rings, the root-mean-square deviation (RMSD) between the ring in question and similar rings identified by Mogul is calculated over all ring torsion angles. If the average RMSD is greater than 60 degrees and the minimal RMSD between the ring in question and any Mogul-identified rings is also greater than 60 degrees, then that ring is considered an outlier. The outliers are highlighted in purple. The color gray indicates Mogul did not find sufficient equivalents in the CSD to analyse the geometry.
